Author	Vincent Maggioni				
Defect #	Description	Severity	Input	Output	How Corrected
1	Compiling errors, "firebase.Promise does not exist"		2 None, compilation error when running tests	Compilation errors	AngularFire2 has a new version and running npm install accidentally upgraded the package. Simply uninstall and reinstall the package and specify the package
2	app.auth does not exist		2 None, compilation error when running tests	Compilation errors	Error still persists, solution unknown
3	Cross origin requests are only supported for protocol schemes: http, data, chrome, chrome-extension, https.		1 Component should exist	Compiler warning as put in the description	Import DynamicModule and detect changes to the web page
Product	Find Hub				
Date	10/12/2017				
Author	Brian, Sairam				
Defect #	Description	Severity	Input	Output	How Corrected
FH_1	When a user presses the "Recent Hubs" button more than once, an error is thrown saying "object is not a function".		2 Press the "Recent Hubs" button multiple times to see what hubs show up in the results.	The list should update each time to show the list of hubs that the current user has joined recently.	We used an array and a function called "recentHubs". So the scope of the variable "recentHubs" changes from a function to an array and an error is thrown the second time the function is called. We changed the name of the array to something else to update the list each time "recentHubs" is called.
Product	Getting Started				
Date	10/12/2017				
Author	Samuel Kuhns				
Defect #	Description	Severity	Input	Output	How Corrected
GS_1	after setting nickname, the nickname field should display the current nickname, but displays default email instead		1 set nickname, navigate back to getting started screen	nickname is not filled in as it should be	force user to set a username at least once and do not default to email
GS_2	error is thrown and does not prompt user if no username is given and user tries to continue to next page		2 enter a blank nickname	app crashes	handle null check properly
GS_3	No error message prompt in null name		1 enter a blank nickname	nothing	add error prompt
Product	Join Hub				
Date	10/12/2017				
Author	Neil				
Defect #	Description	Severity	Input	Output	How Corrected
JH_1	No prompt for hub not found		1 hub that does not exist	nothing	Add a error prompt of hub not found
Product	Hub View				
Date	10/12/2017				
Author	Brian, Sairam				
Defect #	Description	Severity	Input	Output	How Corrected
HV_1	Whenever we enter the "Users" tab each consecutive time, there is one more instance of all the users that have joined that hub.		1 Click on the "Users" tab, go to some other tab, and then go back to the "Users" tab.	The "Users" tab should contain all the users that have joined that hub.	The User objects are being added to the same array each consecutive time the tab is clicked. So, now we get the list of users stored under the hub entry in the database when the "Users" tab is clicked.
Product	Create Hub With Location				
Date	10/12/2017				
Author	Brian				
Defect #	Description	Severity	Input	Output	How Corrected
CHL_1	User should be able to create hub without being required to use location but cannot		1 type in credentials and press create hub	error is thrown saying the values of the location are undefined	give location a default value in the database if the user does not wish to use location services so that it does not try to read a null value
